

VanMar Suites: sold out office space, plus *7 new* virtual tenancies

A full automation backend and billing command center replaced spreadsheets, phone tag, and manual billing.

NEW VIRTUAL
TENANCIES

BEFORE

VanMar Suites ran bookings, tenancies, and billing by hand. None of it talked to the website. A prospective tenant could browse listings, but everything after that first click, the follow-up, the paperwork, the invoice, ran through separate, disconnected steps.

WHAT WE BUILT

We built VanMar Suites a website backed by a full automation system and a billing command center. One system now runs the entire leasing operation, from first inquiry to signed tenancy to invoice, with no manual handoff in between.

AFTER

The site pulled 15,000 impressions and 1,120 clicks. VanMar Suites filled every office space and booked seven new virtual tenancies, through the same system that used to require manual follow-up at every step.

How we got *VanMar Suites* there

01

Discover

A free call to map exactly where leasing, billing, and follow-up were breaking down.

02

Blueprint

A written build plan and fixed quote for the automation backend and billing center, delivered within days.

03

Build & Launch

Website, automation, and billing shipped as one connected system, live in roughly 7-14 days.

04

Support

Ongoing reporting, so leasing and billing keep running without VanMar chasing the details.

MISSION HUB TAKEAWAY

"Automation didn't just fill vacancies. It removed the bottleneck that kept them empty."
